Examiner: Yuan      S.N. 09/819,434      Art Unit: 1745      March 31, 2005

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 6, 2004 has been entered. Claim 1 was amended.

2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on September 11, 2002.

***Claim Rejections***

3. The claim rejections under 35 U.S.C. 112, first paragraph, on claims 1-18 are withdrawn because the support for the recitation can be found in the instant disclosure page 6, lines 7-13. The claim rejections under 35 U.S.C. 102(b) as anticipated by Ovshinsky et al. on claims 1-18 are withdrawn because the independent claim 1 has been amended.

***Reasons for Allowance***

4. Claims 1-18 are allowed. The invention of independent claim 1 recites a fluid-cooled battery pack system comprising a battery pack case having at least one coolant inlet and at least

one coolant outlet, a plurality of battery modules, each battery module including at least one cell and having edge portions with dimensions that vary in a thickness direction within a predetermined tolerance and coolant flow paths formed for each battery module between the adjacent modules or between the module and a battery pack structure, wherein a target width of the coolant flow paths is set so that a variation in temperature between the batter modules is maintained within a predetermined range and the thickness direction of the edge portions is parallel to the width of the coolant flow paths. The closest prior art of record, Ovshinsky et al., does not teach or suggest a battery module having edge portions with dimensions that vary in a thickness direction within a predetermined tolerance and the thickness direction of the edge portions is parallel to the width of the coolant flow paths as recited in the claim.
